Risque	Titre	Description	Mitigation
Critique	Golden Ticket successfully generated	Forged Kerberos TGT for user 'Administrator' in domain 'essos.local'. Valid for 8760 hours (1 year). Persists across krbtgt password changes.	1. IMMEDIATELY reset krbtgt password TWICE (purges Kerberos cache). 2. Audit all Kerberos tickets (look for TGTs with unusually long lifetime). 3. Monitor for 4769 (TGS request) events. 4. Force all users to re-authenticate immediately.
Info	Golden Ticket Usage	To use the golden ticket, set KRB5CCNAME environment variable and run psexec. This grants SYSTEM access to any computer in the domain.	Monitor KRB5CCNAME usage and unusual impacket-psexec execution
